

Finally...

DNA TESTING

is no longer just for the rich

From today, everyone can:

Check your DNA at Zero Cost

Avoid 10 wasted years of wrong health choices

HEALTHIE™ DNA FORTUNE CODE

DNA Test. No Longer Just For The Rich

HEALTHIE™

DNA FORTUNE CODE

Don't wait until your health fails to regret
Decode your DNA and skip ten wasted years

The Secret to the Health and Longevity of the Rich and Famous

Why do nobles, the wealthy, and celebrities around the world always seem **healthier and live longer**? It's not because of some magic exercise or miracle pill... It's because they checked their DNA early and avoided the “risk genes” that could cause future health problems.

The Rich Stay Healthy

Not by Guessing But by Science

The secret of the **rich and long-lived** isn't luck.

They use science to make the right choices.

But us? We guess. We guess from talks, from ads, from friends, from luck, trying to figure out what our body needs. One wrong guess wastes money; ten years of guessing could cost a life.

Why a “Normal” Check up Can’t Save You

Have you heard stories like these?

“

A friend's father spent thousands on a premium check-up. The report said everything was fine, yet just a few months later he was diagnosed with late-stage liver cancer.

“

A neighbor proudly showed a “perfectly normal” check-up report — only to discover a tumor half a year later.

“

Another uncle walked 10,000 steps every day, looking strong and healthy, but suddenly collapsed from a heart attack.

We believe check-ups can shield us from danger, but often they're nothing more than a piece of paper saying “you're fine for now.”

Check-ups only see the now. DNA testing reveals the future.

A medical check-up can only tell you if something is wrong right now. DNA testing shows you the hidden "health bombs" waiting in your future.

Remove the time bombs in your body

Many wealthy families started checking their DNA more than ten years ago. Not because they were sick, but because they knew real health means finding those hidden “time bombs” before they explode.

And us? We usually wait until something bad happens before we check. The truth is, you only need to test your DNA once in your life — and it can already tell you:

If you carry cancer risk genes

If you have inherited risks for heart disease or stroke

If you carry genetic conditions that could pass to your children

Which nutrients your body cannot absorb, no matter how much you take

Which foods might harm you instead of helping you

If you have a “high-fat sensitive” body type — gain weight easily, and damage your health faster

Even your natural personality, potential, and hidden talents

These answers were written in your genes the day you were born. Even if you don't look, they won't disappear. But if you check, you can prepare early — and avoid ten wasted years.

DNA FORTUNE CODE™

Decode 1,099 Insights into Your Health

A DNA report is not a medical check-up **It is your body's instruction manual.**

HEALTHIE™ DNA Fortune Code Report uses internationally certified, advanced DNA technology. With just a 30-second cheek swab, it can decode 1,099 genetic insights. The report covers disease risks, nutrient absorption, drug response, body traits, and more — giving you a complete personal health map.

It doesn't tell you whether you are sick. Instead, it shows the risks and health challenges you may face in the future, so you can prepare early and avoid years of mistakes.

**Health is not about guessing.
It's about science.**

11 CORE DNA TESTS

One test for you, reassurance for the whole family.

1 Chronic Disease Risk

Catch it early, Prevent it early.

Checks if you carry high-risk genes for high blood pressure, heart disease, diabetes, or stroke — helping you prepare years ahead with data, not luck.

2 Cancer Risk

Prevention is the key to fighting cancer.

Analyzes risk genes for breast, colon, lung, liver and other common cancers, so you can plan and screen early instead of waiting until illness appears.

3 Genetic Carrier Analysis

It's not just about you — it's about your children too.

Checks if you carry genes for inherited conditions like thalassemia or G6PD deficiency, so you can protect the next generation in advance.

4 Nutrition & Diet Management

The right supplement are the ones your body truly needs.

Find out which nutrients your body can absorb and which are a waste — from calcium and iron to vitamins and lactose — so your nutrition is precise, not random.

5 Micronutrient Metabolism

The danger is not shortage, but poor absorption.

Analyzes how your body processes vitamins B and D, iron, calcium, zinc, and more, guiding you to supplement the right way and avoid burdening your body.

6 Drug Response Genes

Avoid side effects, get the right medicine.

Shows which drugs work best for you and which carry higher risks, so doctors can prescribe with more confidence.

7 Mood & Sleep Tendencies

It's not laziness — it's your genes.

Anxiety, insomnia, irritability may be linked to serotonin or dopamine genes. The report helps you find the root cause and improve sleep and mood.

8 Metabolism & Weight Management

Can't lose weight? Check your genes first.

Some bodies store fat more easily or burn slower. The report guides you to the right diet and exercise, avoiding years of trial-and-error dieting.

9 Exercise Guidance

Running or weight training? Your genes decide.

Find out if your body is built for endurance, cardio, or strength — train smarter, prevent injuries, and see better results.

10 Infectious Disease Susceptibility

Protect earlier, worry less.

Reveals if you're more likely to get infections like *H. pylori* or tuberculosis — especially useful for families with kids, elderly, or weaker immunity.

11 Talents & Personality Traits

See the bright spots in your genes.

Understand your natural talents, learning style, stress response, and leadership potential — helping you shape a clearer path forward.

Not a Cheap Test
**But the Same
DNA System Used
by Top Hospitals**

DNA testing is not something to do casually, and not all systems are the same. **HEALTHIE™ DNA Fortune Code** does not use entry-level or low-cost equipment. We use the **Illumina NovaSeq™** platform from the United States – the global gold standard in DNA sequencing. This company is valued at over USD 60 billion, and its systems are used in more than 70% of the world's top hospitals, cancer research centers, and university labs. It is the trusted choice for nobles, the wealthy, and families who take health seriously.

Internationally Certified Labs

Our partner laboratories hold multiple international accreditations:

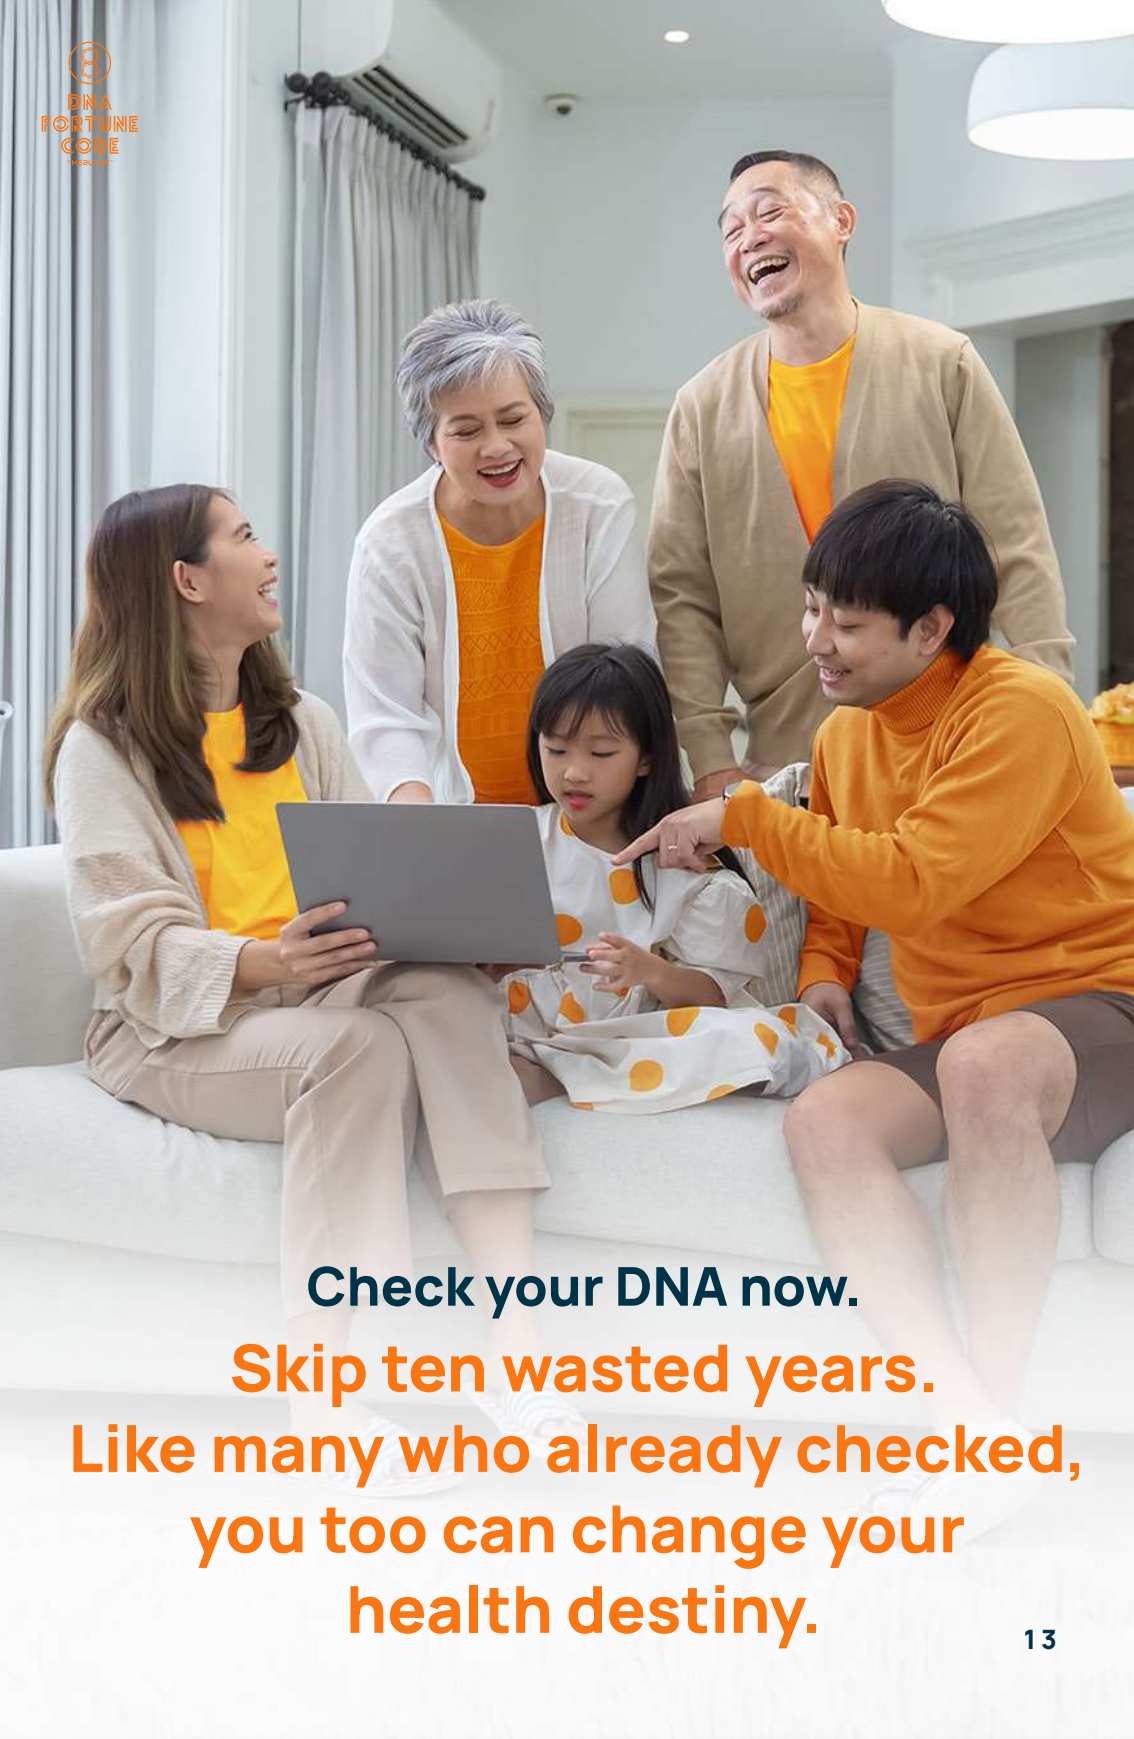

- ✓ ISO 9001 Quality Management Certification
- ✓ ISO 27001 Information Security Certification
- ✓ ISO 27701 Privacy Information Management Certification
- ✓ CAP Accreditation (College of American Pathologists, USA)
- ✓ CLIA Certification (Clinical Laboratory Improvement Amendments, USA)
- ✓ Illumina Propel Certified (Technology validation by Illumina, the global leader in DNA sequencing platforms)

Medical-Grade Accuracy

Our DNA testing system achieves a precision rate of 99.999%, meeting the highest medical standards.

We believe that the technology decoding your life's blueprint must be held to the strictest standards – because this is the steering wheel of your lifelong health.

Check your DNA now.
Skip ten wasted years.
Like many who already checked,
you too can change your
health destiny.

My daughter had stomach pain for years. We saw many doctors with no answers, until the DNA report showed a lactose defect. She simply couldn't digest milk. The answer was hidden in her genes all along.

Working Mom

USA

I did premium check-ups every year, yet I still fainted and was hospitalized. Later, DNA revealed a heart rhythm gene issue that check-ups can't detect. Adjusting my lifestyle in time finally gave me peace of mind.

Financial Consultant

Singapore

I took calcium tablets for 10 years but my bone density stayed low. DNA testing showed a calcium absorption defect — no matter how much I took, it didn't work. After switching to targeted nutrition, I finally saw results.

Retired Civil Servant

Hong Kong

I could never lose weight — DNA showed my fat metabolism was poor. After changing to the right diet, I lost 6 kg in 3 months.

Housewife

Malaysia

My father had an early stroke, and DNA revealed I carry the same risk. Now I follow the report to manage my lifestyle, and I feel more at ease.

Entrepreneur

Guangzhou, China

Doctors blamed my diet for high blood sugar, but DNA showed I carry a diabetes risk gene. With better stress and sleep management, my sugar is stable now.

School Teacher

Australia

My mother died of breast cancer, and DNA confirmed I carry the risk too. With yearly screenings, I caught an early lump last year — it saved my life.

Cancer Survivor

Taiwan

Disclaimer: These cases come from public sources and are for reference and education only. DNA testing results may vary for each person and are for health management, not a substitute for medical advice. For health issues, please consult a doctor. Images are models, not actual clients.

A 30-Second Swab for a Lifetime of Peace of Mind

You might think DNA testing is complicated — blood draws, hospital visits, long waits? Actually, it's simple:

- ✓ No blood, no needles
- ✓ Done at home, no hospital needed
- ✓ Completely painless — just 30 seconds

All it takes is a gentle cheek swab with a special cotton stick. Send it back to our partner lab, and it will be tested and decoded under international standards. For you and your family, it's like removing hidden health risks in the simplest way.

1,099 Insights – and We'll Guide You Through Them

Worried the report might be too complicated? Don't be! Every user gets 24/7 access to our one-on-one AI Health Assistant. You can chat in Malay, Chinese, or English, and it explains each DNA insight in a simple, friendly way, like talking to someone who really understands you. Want something even more personal? You can also upgrade to a consultation with a professional health advisor, at an affordable fee.

DNA Testing FAQs

Q

**Is DNA testing like fortune-telling?
Will it make me more anxious?**

A No – it's science, not superstition. DNA testing doesn't scare you, it guides you. It shows potential risks so you can prepare early and feel more at ease.

Q

**The report sounds complicated.
What if I don't understand it?**

A Don't worry. Every user is guided by a professional consultant who explains the results in simple words, and helps you find the right diet, nutrition, and lifestyle.

Q

Is it safe? Will my data be misused?

A Data security is our bottom line. All samples are processed in ISO- and CAP-certified labs with full encryption. Your data is only used for testing – nothing else.

Q

**I already do health check-ups.
Do I still need DNA testing?**

A Check-ups tell you if you have a problem right now. DNA testing shows risks that may appear in the future. They complement each other – DNA can reveal what check-ups can't, such as nutrient deficiencies, inherited conditions, and metabolism issues.

Q

Can children or elderly people do it?

A Yes! Children benefit from carrier testing, and seniors from chronic disease screening. One test brings value for the whole family.

Q

I feel healthy now. Do I still need it?

A Looking healthy doesn't mean no risk. Many people with "normal" check-ups still face sudden problems from hidden genes. Testing early means peace of mind early.

Q

Do I need to repeat the test in the future?

A No. Your DNA never changes. One test lasts for life – your personal health blueprint, worth having as early as possible.

DNA testing was once only for the rich...

We Disagree To That!

In the past, a single DNA test cost tens of thousands and reserved only for the wealthy, celebrities, and nobles. But we believe 🧬 life should be equal. DNA technology should not belong only to the rich!

HEALTHIE™ is here to change that. We fight to bring high-end health technology to everyday people. Our mission: to make DNA testing available for all.

A New Revolution: **ZERO PRICE** **DNA Testing**

From today, everyone can check their DNA at zero cost. Discover potential health risks 10 years earlier, and take control of the future.

What was once the privilege of the few will now become a health tool for everyone.

Each month, we give away 1,000 Zero Price DNA tests. Sign up now to get your own DNA Fortune Code™.
